Type over the blue cells. The black cells work themselves out.

How to use this timesheet

Fill it in daily. Never on a Sunday night from memory.

The colour code

Blue on cream	an input — change these
Black	a formula — leave alone
Green	a link to another sheet

What the columns mean

COLUMN	WHAT GOES IN IT	WHO FILLS IT IN
Mon to Sun	Hours actually worked. Half hours are fine. Zero if they were not there.	The person, daily
Total hrs	Adds itself up. Do not type over it.	Nobody
Chargeable	The hours you can put on an invoice or an application.	Whoever prices the job
Non-chargeable	Works itself out. Total minus chargeable.	Nobody
Day rate	What that person costs you for a standard day.	The office, once
Days	Total hours divided by a standard day. Shows part days honestly.	Nobody
Amount	Days times the day rate. What the week cost you for that person.	Nobody
Why	One line. 'College', 'plant breakdown', 'pricing'. This is the useful column.	The person, daily

Why the chargeable split matters

- Every hour you pay for and cannot invoice comes straight off the job. A week at 92% chargeable is a good week. A week at 70% is a job losing money quietly.

- The 'why' column is where the pattern shows up. Three weeks of plant breakdown is a hire company problem. Three weeks of 'waiting on others' is a contract problem.

·

Training and college hours are non-chargeable and that is fine. Say so, so nobody thinks the week went badly.
